

Cordless Lift Statement

Written confirmation that cordless lift is the standard configuration on every Veneta line, with published operation per line.

FOR COMPLIANCE FILES

STATEMENT

Cordless lift is standard on every line

Veneta confirms that cordless lift is the standard configuration on all eight product lines listed below. No line ships with a looped operating cord, a cord cleat or a tension device as its standard configuration.

Cellular shades are published as cordless with a rating against ANSI/WCMA A100.1, the American National Standard for the safety of corded window covering products. Faux wood blinds also offer a standard cord lock as a customer-selected option; specify cordless explicitly where a project requires it.

Published operation by line

LINE	PUBLISHED OPERATION
Cellular Shades	Cordless, top-down/bottom-up, TruQuiet™ motorized
Roller & Solar Shades	Cordless, continuous loop, TruQuiet™ motorized
Roman Shades	Cordless, TruQuiet™ motorized
Faux Wood Blinds	Cordless, standard cord lock, TruQuiet™ motorized
Shutters	Front tilt rod or hidden rear tilt
Sheer Shades	Cordless, TruQuiet™ motorized
DualDrape™	Cordless wand rotate and traverse
Vertical Blinds	Cordless wand rotate and draw

LIMITS OF THIS STATEMENT

This statement covers the operating system only. It is not a fire, smoke, acoustic or thermal classification, and Veneta does not publish those ratings. A project that needs a tested classification needs a test on the assembly as installed.

Where this matters most

- Nurseries, children's bedrooms and any room a child sleeps in.
- Multifamily and hospitality, where the occupant is not the specifier.
- Education and healthcare, where a looped cord is usually prohibited outright.
- Low windows and window seats, where a cord would sit within reach.
