

Fabric & Openness Schedule

Opacity options, openness factors and published colourways for all eight Veneta lines.

FOR SPECIFIERS AND DESIGNERS

SCHEDULE

Fabric, opacity and colourway schedule

Openness factors, opacity options and published colourways for all eight lines, in the order they appear in the spec book.

HOW TO READ THIS DOCUMENT

Every range, size, material and option in this document is the published figure from venetawindowfashions.com. Nothing here is estimated. Where a figure is not published — energy savings, acoustic ratings, U-factors — this document says so rather than supplying a number. Pricing is set by The Home Depot and is not published by Veneta. Fabric weights in ounces per square yard are not published by Veneta and are therefore absent from this schedule.

Opacity and openness by line

LINE	OPACITY OPTIONS	OPENNESS / UV	MATERIAL
Cellular Shades	Light filtering, room darkening, blackout	Not published	Single cell 3/8" · Double cell 9/16"
Roller & Solar Shades	Solar screen, light filtering, blackout	1%, 3%, 5%, 10%, 14%	
Roman Shades	Unlined, privacy, blackout	Not published	
Faux Wood Blinds	See line page	Not published	Moisture-resistant polymer composite
Shutters	See line page	Not published	Engineered hardwood composite
Sheer Shades	Light filtering, room darkening vanes	Up to 88% with vanes open	Knit sheer, front and back
DualDrape™	Light filtering, room darkening	Not published	Removable and washable
Vertical Blinds	See line page	Not published	Vinyl, fabric, S-curve vinyl

READING OPENNESS

Openness factor is the percentage of the weave that is open. A lower number cuts more glare and heat; a higher number keeps more of the view. Openness is not privacy: a lit room is visible through any screen fabric after dark.

CELLULAR SHADES

Cellular Shades colourways

CHIP	COLOURWAY	AVAILABLE OPACITY	REFERENCE
	Alabaster	Light filtering, room darkening, blackout	venetawindowfashions.com/cellular-shades
	Linen	Light filtering, room darkening, blackout	venetawindowfashions.com/cellular-shades
